

# Gillingham PS 1

Andrew Gillingham

January 2019

## 1 Introduction

My interest in analytics and data science actually started my junior year in high school after I saw the movie Moneyball. After that movie I realized that there was more to baseball than just playing it. When I came to OU as an undergrad, I majored in Sport Management and minored in Economics so that I could one day work for a pro baseball team. I took this class so that I could learn more about programming and how I can use it in the future. Although I didn't need to take this class I wanted to take it because I know it will be beneficial in the long run. For the project I may do something similar to my thesis, or at least use similar data while looking at some other relationship. After My plan for after graduation is to hopefully get a job in baseball as an analyst. However, I have also recently applied for jobs with ESPN and EA Sports. As long as I am working in or around sports, I know I will be happy with my decision.

## 2 Equation

$$a^2 + b^2 = c^2$$
